

Keywords index

Volume 5, 2018

- anomalous diffusions – 457
- asymptotic normality – 37

- Banach lattices – 501
- Bessel transforms – 167
- binomial distribution – 385
- Bismut–Elworthy–Li formula – 145

- characteristic function – 81, 207, 353
- Cliquet option pricing – 81, 317
- compound Poisson process – 317
- computation of greeks – 145
- concentration function – 207
- conditionally Gaussian processes – 483
- confidence ellipsoid – 225
- confidence region – 37
- consistent estimator – 37
- continuous-time nonlinear regression – 191
- convex stochastic process – 471
- Cox proportional hazards model – 37

- dependence measure – 353
- discrete and distributed delays – 337
- distance covariance – 353
- distribution function – 317
- drifted Brownian motion – 445

- E -martingales – 501
- EM-algorithm – 225

- entire asymptotic separation – 415
- equity indexed annuity – 81, 317
- errors in variables – 247
- exponential bound – 129
- exponential mean square stability – 337

- factorial moments – 207
- Fejèr sums – 429
- finite mixture model – 225
- finite speed of propagation – 457
- Fourier transform – 81, 317
- fractional advection-dispersion – 521
- fractional Cox–Ingersoll–Ross process – 99
- fractional diffusion – 521
- fractional gradient – 457
- fractional Poisson process – 509
- fractional processes – 297
- functional model – 247

- Gaussian random field – 353
- generalized integer-valued autoregressive processes – 53
- Greeks – 317

- heavy-tailed particle tracking – 521
- Hermite–Hadamard inequality – 471
- high frequency data – 297
- hitting times – 167
- hybrid stochastic volatility models – 145

- inference for mixtures – 1
- infinite divisibility – 509
- inhomogeneity – 129
- inverse subordinators – 509
- jointly strictly sub-Gaussian noise – 191
- jump-diffusion model – 317
- Kolmogorov metric – 207
- large deviations – 483
- large financial market – 415
- least squares estimator – 191
- Lévy processes – 297, 317
- limit theorems – 297
- linear regression – 225, 247
- log-return of financial asset – 81
- Lundberg's inequality – 129
- Malliavin calculus – 145
- Markov Binomial distribution – 207
- martingales – 501
- maximum likelihood – 225
- measurement error model – 247
- measurement errors – 37
- Meixner distribution – 81
- Meixner–Lévy process – 81
- method of moments – 1
- mild solution – 429
- minimum distance – 1
- mixed fractional Brownian motion – 415
- mixture with varying
 - concentrations – 225
- model-based clustering – 1
- moving averages – 297
- multitype Galton–Watson branching
 - processes with immigration – 53
- multivariate regression – 247
- negative definite function – 353
- nonlinear stochastic differential
 - equation – 337
- nonparametric estimation – 225
- numerical methods – 385
- optimal value of absolute constant in
 - Berry–Esseen inequality – 385
- order of nonlinearity higher than
 - one – 337
- path-dependent exotic option – 81, 317
- Poisson process – 167
- Poisson-Gamma subordinator – 167
- probabilities of large deviations – 191
- probability measure change – 81
- random flights – 457
- regions of stability – 337
- relative entropy – 415
- risk model – 129
- ruin probability – 129
- ruin problem – 483
- sensitivity analysis – 317
- simultaneous estimation of baseline
 - hazard rate and regression
 - parameter – 37
- stability in probability – 337
- stable convergence – 297
- stable Lévy diffusion – 521
- stochastic differential equation – 81, 99, 317
- stochastic Fourier series – 429
- stochastic fractional integrals – 471
- stochastic independence – 353
- stochastic measure – 429
- stochastic wave equation – 429
- Stratonovich integral – 99
- strong asymptotic arbitrage – 415
- strong consistency – 247
- structured product – 317
- subordinators – 509
- supremum of sums – 129
- tail probability – 129
- tempered fractional derivatives – 445
- temporal and contemporaneous
 - aggregation – 53
- time-change – 167
- total least squares – 247
- varying coefficients – 337
- weighted random variables – 207
- X-martingales – 501
