Keywords index

Volume 11, 2024

asymptotic mean square quasistability – 395
asymptotic normality – 1, 195

Besov space – 421
boundary effect – 359

chirp signal – 195
combinatorial approach – 403
conditional expectations – 247
consistency – 359
consistently varying distribution – 31
continuous time – 395
covariance matrix – 403
Cox proportional hazards model – 479

density functions – 303
difference equations – 395
distributed delay – 395

entropic value-at-risk – 373
ergodic theorem – 1
exit problems – 459
exponential distribution – 265

fluctuation theory in discrete time – 459
fractional Brownian motion – 1
fractional Lévy process – 63
Fresnel integrals – 195

gamma distribution – 373
Gaussian processes – 85
Gaussian Volterra noise – 169
Gaussian-Volterra process – 403
generalized BSDEs with jumps – 109
generalized counting process – 439
generalized fractional derivatives – 439
generating functions – 323
global solution – 289

Hausdorff saturation – 265
heavy-tailed distribution – 31
heteroscedastic measurement errors – 479
high frequency data – 149

independent indicators – 217
infinite occupancy – 217
initial values – 323
inverse Gaussian distribution – 373
inverse of stable subordinator – 43
inverse subordinator – 439

Kies distribution – 265

Lambert function – 373
Laplace distribution – 373
law of the iterated logarithm – 217
least common multiple – 133
least squares estimate – 195
Lévy processes – 303
local time – 149

Malliavin calculus – 169, 303
min- and max-distributions – 265
Mittag-Leffler function – 43
mixed model – 1
mixed normal distribution – 149
mixture with varying concentrations – 359
multi-seasonal discrete-time risk model – 323
multiplicative perturbed random walk – 133
multivariable Haar functions – 421

neural networks – 85
non-Gaussian process – 63
nonparametric regression – 359
nonpersistence – 289
normal inverse Gaussian distribution – 373

occupation time – 149
one-step analysis – 459
Ornstein–Uhlenbeck process – 63

Poisson distribution – 373
Poisson process – 439
potential measures – 459
prime counts – 133
probability – 247
probability of bankruptcy – 459
projection problem – 403

quantitative functional central limit theorem – 85

random coefficients – 63
random walk – 323
randomly stopped sum – 31
RCLL martingale – 109
right censoring – 479
ruin theory – 323
running maximum – 303

sandwiched process – 169
small counts – 217
stable Lévy processes – 149
stationary Gaussian stochastic process – 195
stochastic differential equations – 303
stochastic Lipschitz coefficient – 109
stochastic Lotka–Volterra mutualism model – 289
stochastic measure – 421
stochastic monotone coefficient – 109
stochastic permanence – 289
stochastic perturbations – 395
stochastic ultimate boundedness – 289
stochastic volatility – 169
strong consistency – 1, 195
strong persistence in the mean – 289
subordinator – 439
survival probability – 323
SVV model – 169

time-change – 439
trajectories of random functions – 421

upwards skip-free killed random walks – 459

weak convergence – 43
Weibull distribution – 265
Wiener-chaos expansions – 85

Yosida approximation – 109
