

Subject index

Volume 2, 2015

- \tilde{Q} -expansion of real numbers – 371
- AIC and BIC criteria – 51
- approximation rate – 401
- asymptotic consistency – 147
- asymptotic normality – 17, 343
- autoregressive models – 51, 67
- Berkson model – 131
- binary regression – 131
- Brownian motion – 185
- central limit theorem – 29
- cointegration – 51, 67
- compact operator – 147
- consistency – 343
- continuous additive functional – 107
- convergence – 203
- decompounding – 1
- discrete chaos – 327
- discrete-time approximations – 355
- discretized model – 17
- drift parameter – 17
- econometrics time series – 51, 67
- equivalence in law – 287
- errors in variables – 131
- Euler–Maruyama scheme – 355
- exponential bound – 173
- faithfulness of fine packing system for packing dimension calculation – 371
- Feynman–Kac semigroup – 107
- Feynman–Kac formula – 251
- financial markets – 233, 355
- finite mixture model – 343
- finite-time ruin probability – 421
- Fourier transform – 327
- fractional Brownian motion – 29, 147, 219
- fractional integral – 219
- Gärtner–Ellis condition – 267
- Gaussian distribution – 95
- Gaussian process – 267
- Gaussian sheets – 287
- generalized log-Pareto distribution – 391
- Granger causality – 51, 67
- Hausdorff–Besicovitch dimension of a set – 371
- Hellinger distance – 391

- increasing path – 185
- inhomogeneous model – 173, 421
- integral equation with weakly singular kernel – 147
- integral functional – 165, 251, 401
- integral representation – 219

- jump-diffusion process – 203

- Kato class – 107

- Laplace transform – 267
- limit theorem – 327
- linear regression – 297, 343
- logistic regression – 131
- Lundberg-type inequality – 173

- Malliavin calculus – 29
- Markov processes – 165, 251, 401
- maximal residual – 297
- maximum likelihood estimator – 147
- minimax estimator – 297
- mixture with varying concentrations – 343
- multidimensional compound Poisson process – 1
- multiparameter Gaussian processes – 287
- multiple Wiener integrals – 29

- nonparametric Bayesian estimation – 1
- nonparametric estimation – 343

- occupation-time option – 251
- option pricing – 233, 355
- Ornstein–Uhlenbeck process – 233, 355

- packing dimension of a set – 371
- packing-dimension-preserving transformations – 371
- Poisson measure – 203
- posterior contraction rate – 1

- quadratic variation – 29

- randomized periodogram – 29
- rate of convergence – 95, 165
- regression calibration model – 131
- renewal model – 173
- representation of Gaussian processes – 287
- ruin probability – 173

- series expansions – 287
- set indexed process – 185
- simulation – 309
- small deviation – 219
- stochastic differential equation – 17, 203
- stochastic nonstationarity – 51, 67
- stochastic volatility – 233, 355
- stopping time – 203
- strong approximation – 165
- sub-Gaussian random processes – 309

- three-seasonal model – 421
- transition probability density – 107
- trends and breaks – 51, 67
- truncated pseudomoments – 95

- ultimate ruin probability – 421

- variational distance – 391
- von-Mises type parameterization – 391

- weak approximation rates – 251
- Wiener–Itô integral – 327
